

CJPort

Injectronic introduced its CJPort™ platform to increase the capabilities of its automotive diagnostic equipment. Built from the ground up to simplify hardware and software expansion, the CJPort platform provides a simple and elegant method for adding plug-and-play capabilities such injector testers, information systems, enhanced data, data recording, new protocols, wireless communications and more to the CJ4 Scantools. A primary component of the CJPort platform, the CJPort expansion slot, shipped today on CJ4 OBDII Scantools. With the CJPort slot, people can simply plug in CJ4 expansion modules that will range from injectors testers to mass data storage.
